

DEBASAFE™ *Second life* *security bags*

Certified by the German Federal Environmental Office

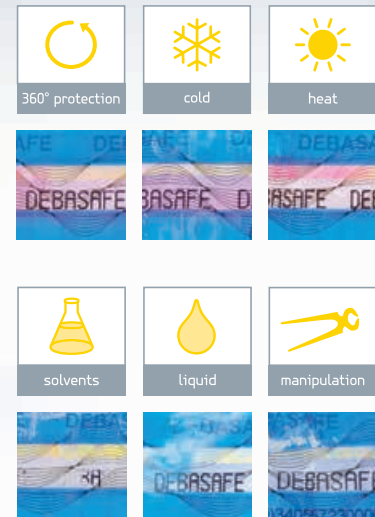

*We take the environment seriously. So, we were particularly delighted when our new security bag DEBASAFE™ **Second life** was awarded Blue Angel certification by the German Federal Environment Office. The recyclable film of the security bags is manufactured from >90% recycled material. Using post consumer material helps to preserve the environment and save resources. DEBASAFE™ **Second life** security bags match all the qualities and security features of the popular DEBATIN safe bags, and can be customised according to your wishes and requirements.*

Systematic security bags – tamper-evident packaging

- film bag manufactured from >90% recycled film
- resource-friendly
- considerable CO₂ reduction (detailed figures on savings provided on request)
- include all qualities and security features of DEBATIN safe bags
- transparent security bags can be customised to individual specifications

DEBATAPE *high plus* security sealing strip reliably displays any tampering

Sources and interesting facts

1. Post Consumer Recycling (PCR) film: made from waste material which has been collected, separated, washed, regranulated and processed back into film
2. The IFEU (Institute for Energy and Environmental Research) has calculated the CO₂ equivalents in the production of new film and PCR film (review 11.2011).
The result: the recycling process generates 1.27 CO₂e/kg, whilst the manufacture of new film generates 2.14 CO₂e/kg.
3. Environmental Protection thanks to Packaging Recycling. A study conducted by the Fraunhofer UMSICHT Institute and Interseroh, October 2008, Publica.fraunhofer.de/dokumente/N-154402.html (German version)
